

LEELA VARADATTA SAI ADDANKI

Denton, TX | +1 (940) 843-0289 | Leelavaradattasaiaddanki9@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

- ServiceNow Developer with 6+ years of experience designing and delivering ITSM, ITOM, and HRSD solutions across healthcare and banking environments, specializing in ServiceNow platform architecture, CMDB strategy, and scalable employee service delivery systems.
- Designed CSDM-aligned service models and HRSD workflows using Service Mapping, Discovery, IRE, and Employee Service Center, improving service visibility and streamlining HR case management for healthcare organizations.
- Built scalable applications and automation workflows using App Engine Studio, Flow Designer, Integration Hub, and Scripted REST APIs, enabling high-volume integrations across EHR systems, HR platforms, and identity services.
- Enabled AI-driven service operations using Now Assist, Predictive Intelligence, and Virtual Agent (NLU), improving IT and HR service efficiency and reducing manual support workload across enterprise environments.
- Developed secure platform solutions using OAuth, RBAC, ACLs, and HIPAA-compliant controls, ensuring data protection and compliance across healthcare and HR service management systems.

TECHNICAL SKILLS

ServiceNow Platform & Core Modules: ITSM (Incident, Problem, Change, Request), ITOM (Discovery, Service Mapping, Event Management), CMDB, CSDM 4.0, HRSD, CSM, SAM, HAM, GRC, Service Catalog

ServiceNow Development & Platform Engineering: JavaScript (ES6+), Glide API, Script Includes, Business Rules, Client Scripts, UI Policies, UI Actions, Flow Designer, Workflow Editor, UI Builder, Service Portal Widgets, Jelly

Integration & API Engineering: Integration Hub, Scripted REST APIs, Table APIs, SOAP APIs, MID Server, JSON, XML, OAuth 2.0, SAML 2.0, LDAP, Active Directory, Webhooks, API Orchestration

CMDB & ITOM Engineering: Discovery Patterns, Service Mapping, Identification & Reconciliation Engine (IRE), Service Graph Connectors, Event Management, CI Lifecycle Management, Data Normalization, CMDB Governance

Application Development (App Engine): App Engine Studio, Scoped Applications, Data Modeling, Business Logic Automation, Low-Code/Pro-Code Development, Workflow Automation, ServiceNow Platform APIs

AI, GenAI & Intelligent Automation: Now Assist (Generative AI / LLM), Predictive Intelligence, Virtual Agent, Natural Language Understanding (NLU), Conversational AI Workflows, AI-Powered Ticket Summarization, Intelligent Routing

Frontend & Experience Layer: HTML5, CSS3, AngularJS, Bootstrap, Responsive UI Design, Service Portal Development, UI Builder Experience Framework

Cloud, DevOps & Platform Operations: Microsoft Azure, CI/CD Pipelines, Git, ServiceNow Studio, Update Set Management, Instance Upgrades, Clone Management, Automated Test Framework (ATF), DevOps Integration

Observability & AIOps: Splunk, Grafana, Event Correlation, Alert Integration, Incident Automation, Log Monitoring, AIOps (Event Intelligence)

Data, Reporting & Performance Analytics: SQL, Performance Analytics, Reporting & Dashboards, KPI Tracking, Data Modeling, Data Integrity, Operational Metrics

Security, Governance & Compliance: ACLs, Role-Based Access Control (RBAC), Edge Encryption, Data Policies, Platform Security, Identity Integration, HIPAA, SOX, FDA/GxP

PROFESSIONAL EXPERIENCE

ServiceNow Developer

Feb 2024 - Present

FTI Consulting | Dallas, TX

- Designed enterprise ITOM architecture using Service Mapping, Event Management, and CSDM 4.0 across client environments including healthcare systems, improving service visibility by 30%, enabling accurate impact analysis for EHR and critical applications.
- Led AI-driven service transformation using Now Assist, Predictive Intelligence, and Virtual Agent (NLU) across client service desks, improving ticket resolution efficiency by 20%, reducing manual triage for operations and clinical support teams.
- Architected integrations using Integration Hub, MID Servers, and Scripted REST APIs to support high-volume data exchange across enterprise systems including EHR platforms and HL7/FHIR interfaces, improving data reliability and interoperability.
- Established event correlation workflows by integrating Splunk with ServiceNow Event Management, reducing mean time to detect incidents by 25%, improving uptime across client-facing and patient-critical applications.
- Implemented CMDB governance using IRE rules, Service Graph Connectors, and data normalization across client environments, increasing CI data accuracy by 30%, strengthening dependency mapping for change impact analysis.
- Directed secure identity integrations using OAuth, SAML, and Active Directory aligned with enterprise and HIPAA compliance requirements, ensuring secure access control across distributed platforms.
- Delivered Performance Analytics dashboards to track SLA adherence and operational KPIs across client environments, enabling leadership to identify bottlenecks and improve service delivery outcomes.
- Oversaw platform upgrades and release validation using ATF and controlled deployment pipelines, reducing production defects and ensuring stability across multi-instance enterprise environments.

ServiceNow Developer

Dec 2020 - Jul 2022

Infionics Inc | Chennai, India

- Developed scalable ServiceNow applications using Script Includes, Glide API, and server-side JavaScript to automate Incident and Change workflows, reducing manual validation effort by 25%, which improved process consistency across banking operations.
- Engineered secure REST and SOAP integrations using OAuth 2.0 to connect ServiceNow with core banking platforms, reducing manual reconciliation effort by 40%, which ensured reliable financial data exchange.
- Implemented proactive monitoring pipelines by integrating Splunk and Grafana alerts with incident workflows, reducing production incidents by 20%, which improved system availability for business-critical services.
- Built automated deployment workflows using Update Sets and structured CI/CD practices, reducing deployment time by 35%, which improved release cycle efficiency during maintenance windows.

- Strengthened platform security by implementing ACLs and RBAC controls across HR and payroll modules, reducing unauthorized access risks and ensuring compliance with financial audit standards.
- Optimized CMDB data ingestion by troubleshooting Transform Maps and stabilizing MID Server communication, improving data reliability and enabling accurate incident resolution workflows.
- Collaborated with operations teams to enhance request processing using UI Policies and validation logic, reducing input errors by 20%, which improved data quality for downstream systems.
- Delivered production support by performing root cause analysis using platform logs and diagnostics, reducing recurring incidents by 15%, which improved overall system stability.

ServiceNow Administrator

Apr 2018 - Nov 2020

Infionics Inc | Hyderabad, India

- Configured ServiceNow ITSM modules including Incident, Problem, and Change Management using Business Rules and Workflows, improving ticket resolution time by 20%, which streamlined support operations for enterprise users.
- Built Service Catalog request workflows and forms in collaboration with service teams, reducing manual ticket routing by 25%, which improved request fulfillment efficiency.
- Developed client-side functionality using Client Scripts and UI Policies to control form behavior, reducing data entry errors by 15%, which improved request accuracy and reduced rework.
- Executed platform upgrade from London to New York release using Update Sets and regression testing, reducing post-upgrade defects by 30%, which ensured stable production performance.
- Established structured release practices by creating deployment checklists and test case documentation, reducing deployment errors by 25%, which improved consistency across environments.
- Improved system performance by analyzing platform diagnostics and resolving workflow inefficiencies, enhancing response time and ensuring reliable system usage during peak hours.
- Supported CMDB data maintenance by validating CI records and assisting with data imports, improving data accuracy and enabling better incident and change decision-making.
- Collaborated with cross-functional teams to implement UI enhancements including notifications and templates, reducing request clarification cycles by 15%, which improved user experience and service desk efficiency.

PROJECTS

Enterprise ITSM & ITOM Transformation Platform

- Built a ServiceNow ITSM and ITOM platform using Incident, Change, CMDB, Service Mapping, and CSDM, improving service dependency visibility by 30%, which enabled faster impact analysis during production changes.
- Structured CMDB using Discovery, IRE rules, and data normalization across hybrid environments managing 10K+ CIs, improving data accuracy and reducing incident investigation effort for large-scale infrastructure.
- Enabled event-driven operations by integrating monitoring tools with Event Management and event correlation, reducing alert noise and improving incident response time across enterprise systems.

AI-Driven Service Desk Automation

- Implemented Now Assist and Predictive Intelligence within ServiceNow Platform to automate ticket summarization and categorization, improving ticket handling efficiency by 20%, which reduced manual triage workload.
- Built Virtual Agent workflows with NLU and Knowledge Base integration, enabling self-service resolution for common requests and reducing ticket volume for L1 support teams.
- Designed classification and routing logic using Flow Designer and assignment rules, improving ticket routing accuracy and reducing reassignment across support groups.

Full Stack Employee Service Portal

- Developed a ServiceNow employee portal using AngularJS, HTML5, and Service Portal framework, improving user access to IT and HR services and increasing self-service adoption across internal teams.
- Built reusable widgets and UI components using JavaScript and Glide API, enabling role-based personalization and improving user experience across multiple service categories.
- Integrated Service Catalog workflows and REST APIs to automate request submission and fulfillment, reducing manual processing effort and improving turnaround time for employee service requests.

EDUCATION

Master of Computer Science

Aug 2022 - May 2024

University of North Texas | Denton, TX

Bachelor of Engineering in Electronics and Communication

Sep 2014 - Jun 2018

St. Martin's Engineering College | Hyderabad, India

CERTIFICATIONS

- Certified System Administrator (CSA)
- Certified Application Developer (CAD)
- Certified Implementation Specialist - **IT Data Foundations (CIS-DF)**
- Certified Implementation Specialist - **IT Service Management (CIS-ITSM)**
- Certified Implementation Specialist - **Human Resources (CIS-HR)**
- Microsoft Azure Fabrics DP - 700
